

**Overview**

The SpliceGroup™ SLDXA-2PX series patch cords deliver exceptional performance and reliability for modern high-density fibre-optic environments. Featuring ultra-compact, low-profile connectors, they are engineered to optimise space and simplify cable management.

A key advantage of the SLDXA-2P Series is its innovative design, which allows quick and tool-free polarity reversal without exposing the fibres. These patch cords are offered with optional push-pull tabs and are available in single-mode as well as OM3, OM4 and OM5 multimode variants, supporting a wide range of deployment needs.

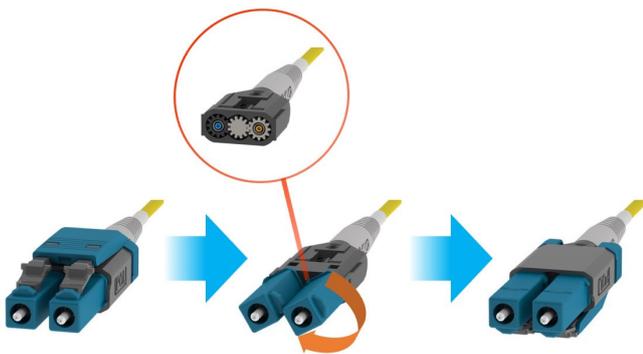

Built with 2 mm LSZH round cable, the SLDXA-2P Series reduces congestion in crowded racks and enhances overall installation efficiency—making them ideal for transceiver applications and vertical stacking configurations.

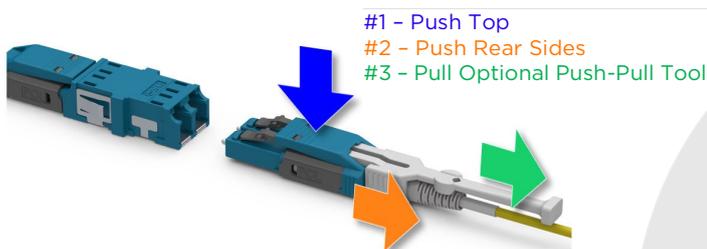

SLDXA-2P LC Uniboot Patch Cords

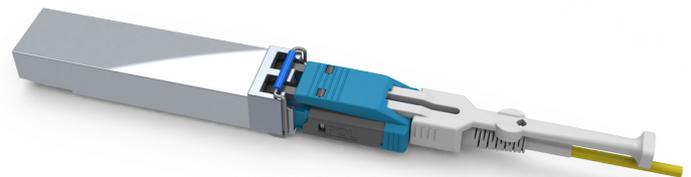

Vertical Stacking

Unique A-B Polarity Reverse

Intelligent Detachable

Transceiver Application

**Main Features**

- Quick, Easy & Safe Polarity Reverse (No tool required)
- Low Profile & Ultra-High Dense Installation
- Optional Push-Pull Tool
- Applicable for ø2mm and ø3mm jacketed cable.

**Performance**

	Single Mode		Multimode
	UPC	APC	PC
Insertion Loss	0.30 dB		0.30 dB
Back Reflection	55 dB	65 dB	30 dB
Application	ø2mm, ø3mm		
Compliant	GR-326-Core		TIA/EIA-568.3-D

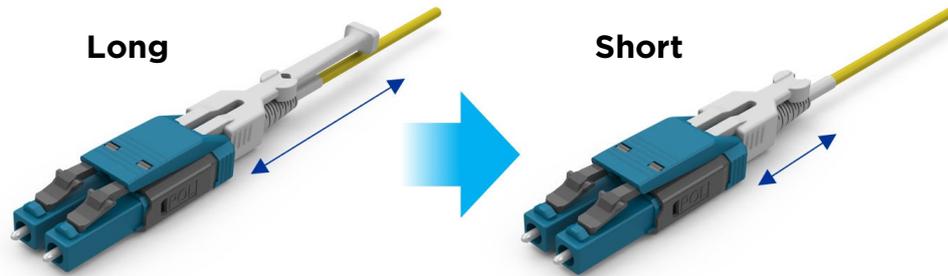

Note:

Compliant to GR-326 TWATL test with ITU-T G.657.A1/A2/B2/B3 single-mode fibers. Compliant to TIA/EIA-568.3-D with multimode bend insensitive fibers of R15 mm or less.

In case LC interface of transceiver have the improper quality for the push-pull mating such as the heavy burrs, SLDXA-2PX without its optional push pull tool is recommended.
